Email Configuration

This F.A.Q is designed to provide information in relation to the Email Configuration settings in iDC File Manager / iDC Client Manager and iDC Account Creation.

Can the email notifications go to different addresses when files are uploaded?

All Upload and Download confirmation emails can only be sent to One Admin address. However you can set up email filters on your mail server to direct confirmations to specific personnel depending on which Client has uploaded files.

How can I setup the File Manager e-mail option on a windows server?

As Windows servers do not have SendMail installed, please ensure you configure the following options in the Configuration.pl file so that the File Manager can send the automated email confirmations:

To enable sendSMTP change sendSMTP "0" to: sendSMTP "1"

To disable sendSMTP change sendSMTP "1" to: sendSMTP "0"

Enter your servers SMTP server address, e.g. mail.yoursite.com / smtp.yoursite.com / IP Address / Localhost

e.g: mailHostSMTP "smtp.yoursite.com"
